Now in its 70th year, ISSCC is a flagship conference in solid-state circuit design. ISSCC reports innovative ideas that will fuel the continued, rapid evolution of integrated circuits (ICs). The IC design community has proven to be agile and resilient in a world scarred by the worldwide pandemic, and we are ready to commemorate the 70th anniversary of ISSCC with an edition focused more than ever on innovation. To enhance our lives and support an increasingly more sustainable development of our society, ISSCC promotes and shares new circuit ideas with potential to advance the state-of-the-art for IC design and to enable systems with ever-improving functionality and efficiency.

Innovative and original papers are solicited in subject areas including (but not limited to) the following:

**ANALOG:** Circuits with analog-dominated innovation; amplifiers, comparators, oscillators, filters, references; nonlinear analog circuits; digitally assisted analog circuits; Sensor interface circuits; analog circuits in sub-10nm scaled technologies.

**DATA CONVERTERS:** Nyquist-rate and oversampling A/D and D/A converters; embedded and application-specific A/D and D/A converters; time-to-digital converters; innovative and emerging converter architectures.

**DIGITAL CIRCUITS, ARCHITECTURES & SYSTEMS**: Digital circuits, building blocks, and complete systems (monolithic, 2.5D, and 3D) for microprocessors, micro-controllers, application processors, graphics processors, automotive processors; digital systems for communications, video and multimedia, cryptography, smart cards, security and trusted computing, accelerators, reconfigurable systems, near- and sub-threshold systems, and emerging applications. Digital circuits for intra-chip communication, clock distribution, soft-error and variation-tolerant design, power management (i.e., voltage regulators, adaptive digital circuits, digital sensors), digital PLLs for processors, neurocomputing with a focus on digital-circuit techniques, and security circuits (i.e., PUFs, TRNGs, side-channel attack countermeasures, and attack-detection sensors).

**IMAGERS, MEMS, MEDICAL, & DISPLAY:** Image sensors and SoCs; automotive, LIDAR; ultrasound and medical imaging; MEMS sensor and actuators; wearable, implantable, ingestible devices; biomedical SoCs, neural interfaces and closed-loop systems; body area networks; biosensors, microarrays; display drivers, sensing or haptic displays; sensing and displays for AR/VR.

**MACHINE LEARNING & AI:** Chips demonstrating system, architecture and circuit innovations for machine learning and artificial intelligence: SoCs, chiplets, multi-chip solutions, processor architectures, accelerators and analog/digital circuits; near-sensor and in-sensor processing schemes; all architectures and circuits leveraging near-memory and in-memory computation with system and SOC level innovations for AI using volatile or non-volatile memories. Hardware optimizations for new ML models including transformers, graph neural networks, hyper-dimensional computing, spiking neural networks and applications including mobile, wearables, data centers and autonomous driving, etc.

**MEMORY:** Macros for near-memory compute and in-memory-compute across various applications; Static, dynamic, and non-volatile memories for stand-alone and embedded applications; memory/SSD controllers; high bandwidth I/O interfaces for memory; memories based on phase-change, magnetic, spin-transfer-torque, ferroelectric, and resistive materials; array architectures and circuits to improve low-voltage operation, power reduction, reliability, and fault tolerance; 3D memory circuits for memory-memory and memory-logic stacking; error correction and yield enhancement schemes for memories; application-specific circuit enhancements within the memory subsystem.

**POWER MANAGEMENT:** Power management and control circuits, regulators; switched-mode power converter ICs using inductive, capacitive, and hybrid techniques; energy harvesting circuits and systems; wide-bandgap topologies and gate-drivers; power and signal isolators; robust power management circuits for automotive and other harsh environments; circuits for lighting, wireless power and envelope modulators.

**RF CIRCUITS and WIRELESS SYSTEMS**: Building blocks and complete solutions at RF, mm-Wave and THz frequencies for receivers, transmitters, frequency synthesizers, RF filters, transceivers, SoCs, and SiPs. Innovative circuit, system and packaging solutions for established wireless standards as well as future systems or applications, such as radar, sensing and imaging and those improving spectral and energy efficiency.

**TECHNOLOGY DIRECTIONS:** Emerging and novel IC, system, and device solutions in various areas such as integrated photonics, silicon electronics-photonics integration, optical phased and focal plane arrays; quantum devices for metrology, computing, etc.; flexible, stretchable, foldable, printable, and 3D electronic systems; biomedical sensors for cellular and molecular targets; wireless power transfer at-distance (e.g., RF and mm-wave, optical, ultrasonic); novel platforms for non-CMOS computing and machine learning; integrated meta-materials, circuits in alternative device platforms (e.g., carbon, organic, superconductor, spin, etc.).

**WIRELINE:** Receivers/transmitters/transceivers for wireline systems, including backplane transceivers, copper-cable links, chip-to-chip communications, 2.5/3D interconnect, on-chip links, optical links, and silicon photonics; exploratory I/O circuits for advancing data rates, bandwidth density, power efficiency, equalization, robustness, adaptation capability, and design methodology; building blocks for wireline transceivers (including but not limited to AGCs, analog and ADC/DAC-based front ends, TIAs, equalizers, clock generation and distribution circuits including PLLs, clock recovery, line drivers, and hybrids).

*This category will be reviewed by either the Digital Circuits or Digital Architecture/Systems Subcommittee.

**This category will be reviewed by either the RF or Wireless Subcommittee.

Deadline for Electronic Submission of Papers: Wednesday, September 7, 2022 • 3:00 PM Eastern Daylight Time (19:00 GMT)
STUDENT ACTIVITIES

Student-Research Preview (SRP): This session provides students with the opportunity to showcase their work and interact with students and researchers from academia and industry. SRP is organized as an Evening Session consisting of short presentations of work-in-progress followed by a poster session. The abstract submission deadline for SRP is October 23, 2022. Refer to the ISSCC Website for more information.

Student Travel Grant Awards: Students who are members of the Solid-State Circuits Society and in a Ph.D. program can apply for partial travel support to attend ISSCC. Visit the SSCS website https://sscs.ieee.org/about/awards for more information.

Silkroad Award: The winner(s) are selected from first-time student-presenting authors at ISSCC whose research is conducted in an emerging region in the Far East.

DEMONSTRATION SESSIONS:

Selected authors of accepted, regular papers will be invited to demonstrate their working circuit or system in the ISSCC Demonstration Sessions. The demonstrations will be held during the Conference social hours on Monday and Tuesday. The selected authors will also provide a poster to augment their demonstration.

SESSION ON IDEAS FOR THE FUTURE

ISSCC is interested in innovation in solid-state circuits more than ever! This year, authors are invited to submit papers on work that is beyond the conventional areas covered in solid-state circuit conferences and has potential to open up new areas for IC research and development. The submitted work needs to be supported by experimental evidence that shows the feasibility in hardware. The papers will be reviewed by the Technology Directions subcommittee. The accepted papers will be presented in a separate innovation session at the conference.

ELECTRONIC SUBMISSION OF ABSTRACT, DRAFT MANUSCRIPT, AND PRE-PUBLICATION MATERIAL:

Authors should submit 2 items for review: 1) An informative and quantitative Abstract; 2) A Draft Manuscript including figures for the Digest of Technical Papers. Be sure to read the Pre-Publication Guidelines (summarized below) carefully.

The Submissions Website will be available starting July 1, 2022. You may consult the Website for instructions at any time after this date. To submit a paper, go to: https://submissions.mirasmart.com/ISSCC2023 to upload the manuscript and provide the requested additional information. Abstract and manuscript must be submitted by September 7, 2022. During the submission process you will be asked for a suggested subcommittee (by subject area) to review your submission, however this subcommittee may be changed by the ISSCC organization to ensure the best review quality. A sample abstract and draft Digest paper can be found at the ISSCC Website (single-column double-spaced format is required for the paper-review process).

ADDITIONAL SUBMISSION DETAILS:

The submission Title must be concise (target ≤12-14 words) and clearly describe the topic of the paper. It should not include more than one or two key metrics or techniques from demonstrated work. If more than one key metric is included in the title, they should be mutually consistent (e.g. the title should not claim performance for one test configuration and power for another test configuration).

The Abstract must be uploaded to the Submissions Website. It must not exceed 500 characters (including spaces). The Abstract must be factual and provide as complete and quantitative a description as possible, including specific and concrete performance data. Claims such as “new”, “advanced”, “novel”, “high-performance”, and “high-speed” are not acceptable in the title or abstract. Please refer to the sample abstract on the ISSCC Website. Note that ISSCC reserves the right to modify the paper title and abstract when technically appropriate.

The Manuscript consists of two PDFs uploaded to the Submissions Website. The first, for the draft manuscript text, is limited to 4 pages in single-column double-spaced format, using 12 pt Arial Narrow font with fewer than 10,000 characters (including spaces). The second, for the figures, must not exceed 10 pages with one figure including caption per page. The first seven figures, including a die photo, must be referred to in the text. In addition, up to three optional supplementary figures can be included for review purposes. We strongly encourage you to include a comparison table as one of the figures. Papers exceeding the length limit will be immediately rejected, as requiring length editing. Complex multipart figures are not allowed (for example, Figures 2a and 2b will be...
counted as two figures!). Tables are counted and labeled as figures. If a die-photo and/or comparison table is available, they can be included as part of the 7-figure limit. Supplementary figures will NOT be part of the final manuscript, and should NOT be referred to in the text of the paper, but serve ONLY as additional material for the reviewers. These 3 figures should be described with no more than 4 sentences in their captions with figures labeled as “Fig. S1, S2, S3”.

References are to be entered individually into the submission website. Up to six references are allowed. Do not include your references in your manuscript. For further details, see the ISSCC Website.

Double-Blind Review. The paper selection will follow a double-blind review process, meaning that both the authors and reviewers will remain anonymous during the paper selection process. All authors MUST adhere to the following guidelines to conceal their identity: (1) Eliminate author names, contact information, and affiliations from the entire manuscript (including PDF metadata, logos on die photos, logos on printed circuit board photos, etc.). Author names can appear in the cited references (see item 2). The submission site allows authors to modify the title (“Paper Title (blinded)”) if the intended title would reveal the authors or their affiliation. (2) Cite all relevant prior work (including your own) in the third person (for example, “It has been shown that… [1]”; do not use the words “my” or “our”). Work that is substantially related to the submission and has been submitted to another Conference/Journal, but has not been published yet, must be cited in an anonymized format* and must be uploaded as supplementary material. This supplementary material does not need to be anonymous, as it will be checked only after paper selection. Do not cite patents. (3) Eliminate acknowledgements and references to funding sources. These can be added later if the paper is accepted. (4) Do not contact the program committee members outside of your own organization to solicit input on your manuscript. The identity of authors is only known to the program chairs/vice-chair and the subcommittee chairs; you may contact them for questions. Manuscripts that are not properly anonymized cannot be considered for review; to ensure your submission complies with these rules please carefully review the sample manuscript, the FAQ on Double-Blind Review, and the guidelines on how to write a good submission at the ISSCC Website. The review process will include a software-based plagiarism check. After paper selection, a final pre-publication check (using the authors’ names and any supplemental material provided) is applied using the guidelines summarized below. ISSCC may withdraw any paper that violates the pre-publication guidelines.

* Citation for related work by the authors that is submitted to another conference/journal but not yet published: [1] Details withheld in accordance with double-blind review process (paper attached as supplementary document).

Review Process and Criteria: Submitted manuscripts are reviewed by an ISSCC subcommittee that covers the topic of the manuscript. The author’s suggested subcommittees are strongly considered when assigning each manuscript to a subcommittee. Submissions are rated by the subcommittee members based on (i) design novelty (ii) significance in its field and (iii) technical quality. Authors should provide clear evidence of what is novel in their work and the extent to which it advances the state-of-the-art. Many submissions will be stronger in novelty or significance, so both are equally weighted by the subcommittee. A high level of technical quality and clarity is a requirement for all submissions. Successful submissions contain specific new results, sufficient detail and data to be understood technically, circuit schematics, measured results for key elements, and tabulated comparisons with recently published work, where appropriate.

For further details on manuscript preparation, check the ISSCC Website: http://isscc.org, or send an email with your questions to the Director of Publications: Laura Fujino, Email: lcfujino@aol.com. All information regarding submission is also available at the Submissions Website (https://submissions.mirasmart.com/ISSCC2023).

Notification of Acceptance: Authors will be notified of acceptance by October 17, 2022. A submission may be accepted as either a regular or short paper. A regular paper is allowed 30 minutes (23 minutes presentation time). A short paper is allowed 15 minutes (12 minutes presentation time). Regular and short papers must meet the same submission and quality standards. They differ only in the determination by the Program Committee of the time required to present their key ideas.

Authors of accepted papers will have an opportunity to modify their manuscript. All information removed/anonymized following the Double-Blind Review guidelines (logo on-die photo, etc.) may be added back to the final paper upon acceptance. The Program Committee may require specific additional revisions. There will be further formatting requirements for the final Digest manuscript. The presenting author is required to register for the Conference in advance.

Conference Pre-Publication Policy: As the premier global forum for the debut of technical innovations in integrated circuits and systems, ISSCC cannot accept papers whose key innovative ideas and results have already been disclosed to the public. To assess the novelty of a paper, the program committee evaluates its content against all background or baseline information that was pre-published by the authors. Disclosures considered as pre-publication include: (1) Publicly available data in articles, manuals, data sheets, trade journals, application notes, other conferences, and press releases, which contain substantial technical information such as schematics, principles of operation, architectures, and algorithms. (2) Some previously, publicly-copyrighted material, such as in an IEEE publication. (3) Material submitted for which publication decision is still pending. (4) Material accepted for publication elsewhere. (5) Material available on a public website at any time up to the first day of the next ISSCC. Disclosures not considered pre-publication include: (1) Electronic copies of articles posted by authors on publicly accessible websites or preprint servers such as arXiv.org. IEEE policy regarding sharing and posting of articles is described in the IEEE Author Center. (2) Preliminary datasheets or a product announcement with no technical details. (3) Presentation at a limited-attendance workshop with no proceedings. A key element here involves the ability to find any handouts via electronic means or in a printed catalog. For example, if handouts are available to attendees of a workshop, but are not subsequently downloadable or orderable, this is acceptable. (4) Information from an advance program or information from IEEE-sponsored press meetings after publication or formal press release. (5) Information provided under non-disclosure agreements (NDA) to customers, partners, or other parties. (6) Final, signed versions of Master's or Ph.D. theses available in open repositories, either printed or online. A thesis published for profit is an exception, and is considered prepublication. (7) Published patents and patent applications. Authors must disclose all material that may fall into the pre-publication category as part of the submission process.

For further details on Pre-Publication Policy, Double-Blind Review or assistance in assigning a subject area, contact the Program Chair: Piet Wambacq, Tel: +32-16281218, Email: piet.wambacq@imec.be

**POLICY REGARDING PAPER-SUBMISSION DEADLINE**

Due to the timing constraints associated with the paper review process, Paper Submissions must be received by the deadlines shown below to be considered by the Program Committee.

**DEADLINE FOR ELECTRONIC SUBMISSION OF PAPERS:**

Wednesday, September 7, 2022 • 3:00 PM Eastern Daylight Time (19:00 GMT)
ISSCC 2023 is currently planned as a hybrid event with in-person presentations along with an option for remote attendees. Speakers should plan to present in person at ISSCC. The safety of our speakers and audience remains a paramount concern. We will monitor global pandemic conditions and make adjustments to the conference format if needed.
